

Shifa Khan

About me

Smart, creative, quick-learner. I like to make things work. Call it brainstorming, problem-solving, troubleshooting, I do it. Bit finicky when it comes to visual aspects (UI/UX/design).

Dream Job - A job where I can build and learn something new everyday.

Build - Something useful that I believe in too. A product I can commit to wholeheartedly and put my blood and sweat into. (metaphorically, of course).

Learn - About good practices of my craft (programming), new technology and different cultures. Be it through technical discussions, pair programming, or just water cooler conversations with people of diverse opinions and backgrounds.

Skills

Work Experience

Software Engineer - Josh Software (Jul 2014 - Current)

During my time at the Ruby on Rails shop, I worked on project called *Brandscope*. The project is an Australian B2B e-commerce startup for the retail industry.

Role :

Front-end designing and development.

Also back-end features such as a HomePage Builder (mini-CMS), ERP integration (NetSuite, ABM), Extensive Reports & graphs.
