## About me

Smart, creative, quick-learner. I like to make things work. Call it brainstorming, problem-solving, troubleshooting, I do it. Bit finicky when it comes to visual aspects (UI/UX/design).

A nature-lover, eternally in love with moonlight. Can trek or travel miles, to adore a scenic view.

**Dream Job** - A job where I can build and learn something new everyday.

**Build** - Something useful that I believe in too. A product I can put my blood, sweat and tears into. (metaphorically, of course).

**Learn** - Good practices of my craft (programming), about new technology and different cultures. Be it through technical discussions, pair programming, or just water cooler conversations with people of diverse opinions and backgrounds.

**Give back** - Contributing to open source is important, and often teaches a lot in the process. I've also started contributing to the gems/libraries I've used.

## Skills

Rails  
MongoDB  
Ruby

Html  
Haml

SCSS

JS  
Coffee

Learning  
Inkscape  
SVG  
React

## Work Experience

### Software Engineer - Josh Software (Jul 2014 - Current)

During my time at the Ruby on Rails shop, I worked on an Australian B2B e-commerce startup for the retail industry. The project provides a platform for Retailers, Suppliers (Brands) and Agents to place orders from catalogues and Refill existing stocks.

**Role:** - Various Back-end features such as a HomePage Builder (mini-CMS), ERP integration (NetSuite, ABM), Extensive Reports & graphs.  
- Front-end designing and development for all features.

## Education

### Graduation

B.E. E&TC (2010-14)

Army Institute of Technology

University of Pune

First Class with Distinction

### Schooling

12th Std - 93%

10th Std - 91%

## Achievements

### Finalist at Code Gladiator

(May 2015)

All India Coding Competition

### Organiser at Rails Girls Pune

(Dec 2014)

Tech workshop for women

### NES Innovation Award

(Jan 2013)

Mobile app innovation competition
